Cheese Sauce Dispenser Program

Gehl's sauces turn ordinary items into extraordinary dishes — simply, easily and affordably. Pour them on sandwiches, nachos, side-dishes and even main course entrees and serve up richer flavor that people crave.

No wonder Gehl's cheese sauces are served over a million times each day!

Single Dispenser Overview

Dimensions: 9" W x 17"D x 23"H

Weight: 16lbs

Power: 120V / 1.7A / 215W

The Single Hot Top2 Dispensers are designed for high-volume operators. These easy-to-use, no-mess dispensers are the most popular nacho cheese dispenser, because they serve warm Cheese Sauce.

This dispenser keeps the dispensing bag at a safe serving temperature of 140°F, while also preheating a second bag for fast changing.

Pair with our high value Great Plains Sauces (4/140 oz.) for the lowest cost per serving.

Single Dispenser Operating Instructions

To get started, date bag with permanent marker. Preheat a bag of cheese sauce (preheating takes 4-6 hours) and remove the cap with the bag opener provided with your dispenser. Attach the valve to the bag fitment and fasten securely using screw collar. The valve opening should be facing downward.

Place bag into dispenser. Using the guides on the side of the valve, slide the valve down until it fits securely into the U-shaped opening in the dispenser pan. Place weight on top of bag for easy dispensing. Note: Place a second bag of sauce on top of the first bag for preheating. It's important to know that the heated shelf life begins during the preheating.

Machine holds yellow cheese for up to 5 days and chili for up to 7 days to maximize profits and minimize waste. Place the lid and the valve guard on the dispenser to allow proper heating and keep hot air in. Never leave a dispenser operating without the Lid and Valve Guard in place.
